

KidWatch APK Install Guide

This guide is for direct APK testers installing KidWatch outside the Play Store.

Official Reference Links

Install Steps

1. Download the latest KidWatch APK to the phone.
2. Open the APK and continue the installer flow.
3. If Google Play Protect warns about the app:
 - Review the warning.
 - On devices that allow it, tap **More details** and then **Install anyway**.
 - If your device does not offer that option, ask the team for an updated build link or support.
4. Launch KidWatch after install.

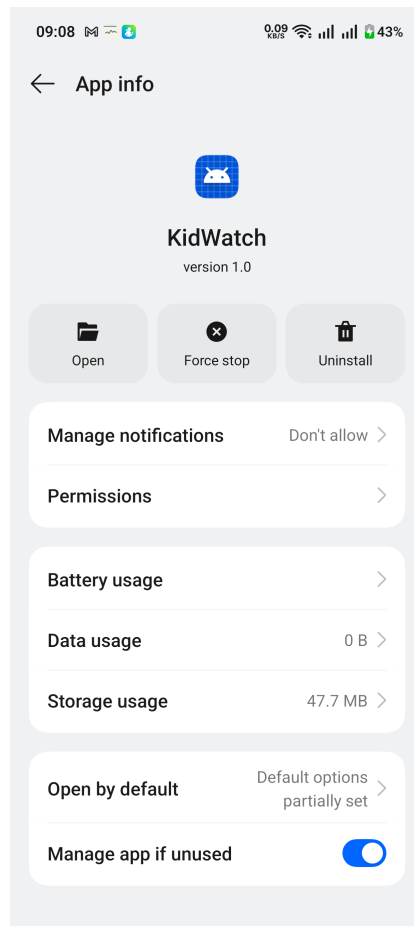

If Accessibility Is Blocked On Android 13+

Some direct APK installs are treated as restricted until you explicitly trust the app in Settings.

1. Open **Settings** -> **Apps** -> **KidWatch** -> **App info**.
2. Open the top-right overflow menu.
3. Tap **Allow restricted settings**.
4. Return to KidWatch and tap the accessibility setup button again.

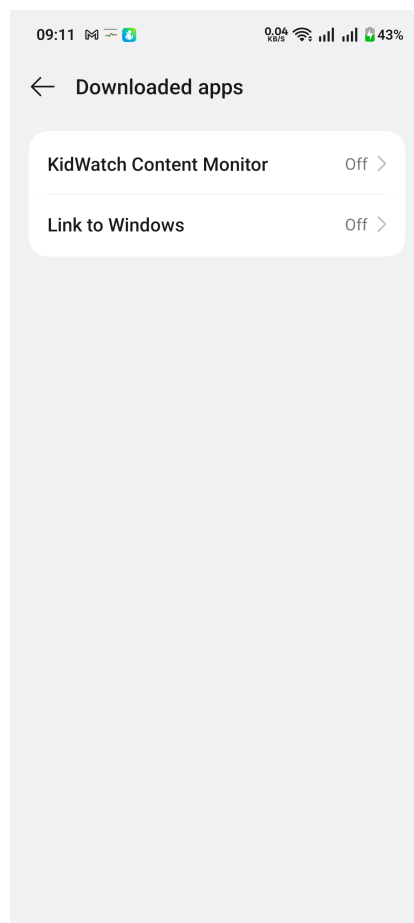

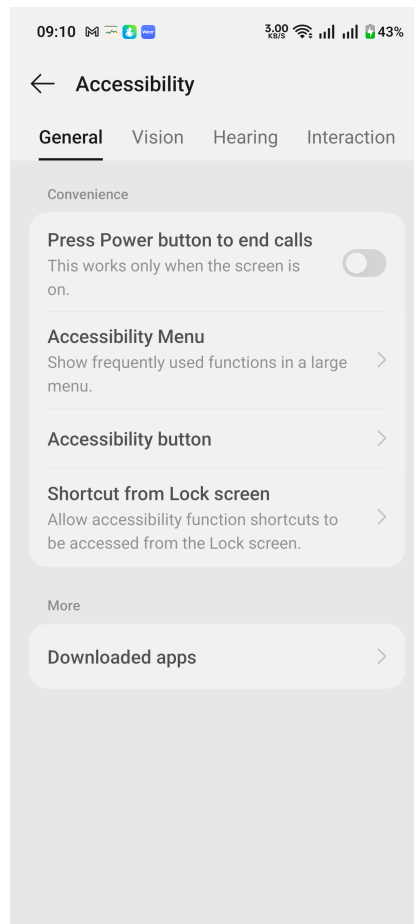

Note:

- The **Allow restricted settings** menu may appear only for direct file installs and may not appear for ADB-installed builds.
- If you do not see the menu, confirm the app was installed from the shared APK file and not from ADB.

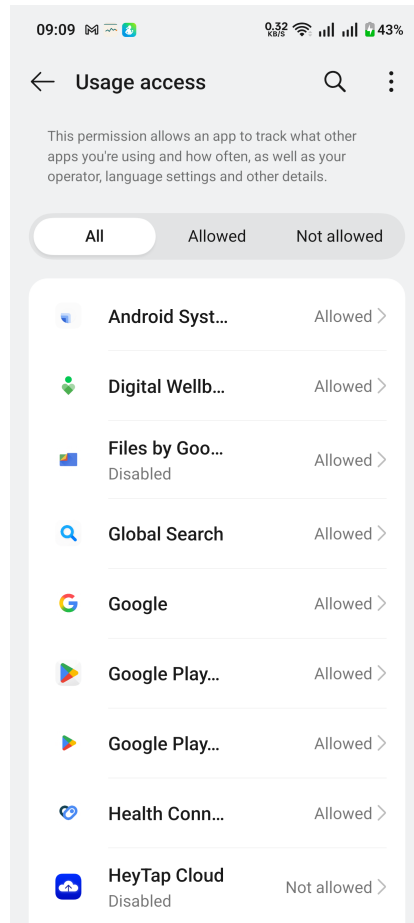

Turn On Accessibility

1. Open Settings -> Accessibility.
2. Tap Downloaded apps.
3. Tap KidWatch Content Monitor.
4. Turn it on and confirm any warning dialog.

Turn On Usage Access

1. Open Settings -> Usage access.
2. Find KidWatch in the list.
3. Tap it and allow usage access.

Quick Tester Checklist

- APK installs successfully
- App launches to onboarding
- KidWatch Content Monitor is enabled in Accessibility
- KidWatch is allowed in Usage access
- Dashboard loads without setup warnings
